

Manufacturers have special features on their mobile phones which are aimed at making mobile phones more accessible and user-friendly for people with disabilities. The mobile phone industry strives to implement these features and does extensive product design and development in these areas.

While the accessible features vary from product to product, most of the products have accessible features such as the following:

- Tactile & tonal feedback from keys
- VibraCall ® alert that gently vibrates
- Identifiable "5" key
- Voice tags for menu navigation
- Voice activated dialling
- Voice Note voice recorder
- Text messaging
- Bright, high contrast displays
- Visual and tonal indicators for power on an off, battery low level, and volume level
- Visual and audible key pad depression indicators
- One and two touch dialling
- Speakers that couple with hearing aid T-coils
- All products can be used with the a Neckloop
- Lanyard pins for handstrap accessories
- Adjustable contrast screens
- Zoom displays
- Brightly backlit displays
- Verbal phonebook list
- Ringer Tones with varying frequencies
